

## POST 2: Filler in face forever (:60-:90s)

HOST: Hey \_\_\_\_, if I get Hyaluronic Acid (HA) Filler injected in my face, is it there forever?

PROVIDER: Let me clear this up. Injectable HA Fillers are temporary. While they can provide satisfying results, they aren't permanent.

HOST: Oh, tell us more!

PROVIDER: Injectable HA Fillers are made to be temporary, and are gradually absorbed by the body over time. Results from most Injectable HA Fillers can last between 6 months to 2 years, depending on the product used and area treated.

HOST: Then why do some people believe filler stays in their face forever?

PROVIDER: Great question, and the answer comes down to perception. Fillers dissolve gradually, and if you've received too much filler or been re-treated too often, product can build up—making it seem like a single treatment is lasting longer than it really is.

HOST: Thanks for setting the record straight!

### **[Caption]**

Some people believe that Injectable Hyaluronic Acid (HA) Fillers will last in their face forever, but this is a common myth. Good thing \_\_\_\_ is here to clear this up with the facts.
