

Let's talk about *filler migration*

1/5 FILLER MIGRATION →

What is *filler migration*?

"Filler migration" is the **possibility** of a filler moving to an area where it was not originally injected.

2/5 FILLER MIGRATION →

Movement is possible with all fillers, but it is *rare*

Fillers can migrate due to a number of factors, including injection technique, but filler migration is **rare and manageable**.

3/5 FILLER MIGRATION →

Injectable Hyaluronic Acid (HA) Fillers can be *dissolved* if a rare side effect occurs

How? An aesthetic provider can inject hyaluronidase into the originally injected area to dissolve the migrated HA.
